ANNUAL REPORT  
OF THE  
Commissioner of Banks  
FOR THE  
YEAR 1941  
PART II  
RELATING TO  
TRUST COMPANIES, FOREIGN BANKING  
CORPORATIONS AND OTHERS THAN BANKS

---

DEPARTMENT OF BANKING AND INSURANCE

# The Commonwealth of Massachusetts

OFFICE OF THE COMMISSIONER OF BANKS  
STATE HOUSE, BOSTON, January 21, 1942

*To the Honorable Senate and House of Representatives  
of the Commonwealth of Massachusetts:*

As required by statute, Part II of the annual report containing the customary detailed statements showing the condition of every trust company under the supervision of the department, is submitted herewith. The corresponding detail with respect to savings banks, co-operative banks, and credit unions will be found in Parts I, III, and IV respectively.

The sudden, dramatic events of the second week of December, when this country was plunged into the World War, overshadow all the rest of a year which was already notable in many respects. At 4:10 P.M. on December 8 we were formally declared to be at war with Japan, and on December 11, in two successive minutes, at 3:05 and 3:06 P.M., respectively, we were at war with Germany and with Italy. Although the impact of the war interrupted many trends and diverted and distorted others, it is nevertheless imperative that those trends and conditions be reported and studied. But, first, a word about the department.

## BANK SUPERVISION

This is the one hundred fiftieth year of public supervision of banks. In that practice, as in many other matters of banking,\* Massachusetts was a pioneer in the western hemisphere. The first known statutory provision for bank examinations in this part of the world was Chapter 6 of the Acts of 1792 which incorporated the Union Bank, located in Boston, and which provided that "any Committee, specially appointed by the Legislature for the purpose, shall have the right to examine into the doings of said Corporation and shall have free access to all their books." So, likewise, the first general statute in the country requiring periodic reports from banks is believed to have been Chapter 132 of the Acts of 1802, approved March 8, 1803, requiring all banks to make semi-annual reports to the Governor and Council.

Although the practice of bank examination has thus existed in this state for a century and a half, the present plan of supervision was inaugurated by Chapter 204 of the Acts of 1906. By that Act, the board of three savings bank commissioners that had previously existed was supplanted by a bank commissioner who had a deputy commissioner, five examiners, and a clerical force of five. There were then three hundred eighty-one financial institutions with slightly more than a billion dollars of assets, including trust departments, to be supervised by the department.

Today, with ten supervisors, an attorney, ninety-four examiners, and a clerical force of thirty-nine (not including the division of liquidations which is under separate supervision), we have the third largest state banking department in the country, being exceeded only by Pennsylvania and New York. As of December 31, 1941, there were under the supervision of the department eleven hundred forty-three financial institutions. Of these, two hundred and two were licensed lenders, leaving nine hundred forty-one banking institutions

\* Some other early firsts would appear from "History of Banking" by John Jay Knox, to be as follows:—Page 15, First private bank, 1686. First issue of paper money in the colonies was by Massachusetts in 1690 in aid of the expedition against Canada. Pages 15, 16, Land bank proposed 1701, 1714 and started in 1739. Page 17, in 1715 Treasury of Massachusetts had a fund of 50,000 pounds, called a bank, which it loaned to citizens on mortgage security. Specie banks 1733, 1739. Page 359, March 8, 1782, first state incorporation of a nationwide bank. Also, February 7, 1784, the second local bank in the country. In more recent years: 1907, first savings bank life insurance; 1909, first general credit union statute. This incomplete list is merely illustrative.

with assets aggregating nearly five billion dollars. In addition, the department has to supervise fiduciary and agency activities of some of the banks involving another billion and a half dollars.

During the past year the department kept well within its budget and, for the first time since long before the depression, completed virtually every bit of the work required of it by statute. The goal of the department, however, is not merely to cover the minimum statutory requirements but to develop further the field of constructive supervision wherein lies its greatest opportunity for service.

To that end, special effort has been made to keep abreast of the best supervisory thought throughout the country and it is a cause of satisfaction that, without solicitation of any sort, the state has been recognized in this field by the election of the director of its co-operative bank division, Mr. N. Lester Whitten, as first vice president of the National Association of State Savings, Building and Loan Supervisors, and by the promotion of the commissioner of banks to the position of first vice president of the National Association of Supervisors of State Banks. This latter organization numbers in its membership all the state bank commissioners, or supervisors, in the United States and in large measure they, and the Association are charged with the preservation of the dual system of state and federal banking, not by opposing the federal system but by cooperating with it and by improving the state system in order that the country may have the benefits of both at their best.

#### THE GREAT DEPRESSION.

In the between-war era the outstanding event in the banking world was the depression. It taught many lessons and, in the long run, probably did more to strengthen the banking systems than any other factor in their history. It took a terrific toll but already the banks have so far profited by its instruction that they are now believed to be stronger and sounder than ever before, with the largest reserves, the greatest liquidity, and the highest degree of inter-cooperation ever known. There appear to be sound reasons to believe that the breakdown of 1933 can never recur. Another great depression may bring some distress but the banks are so far buttressed and inter-connected that the pressure should be cushioned and retarded enough to prevent the catastrophic loss of a final breakdown.

#### FORECLOSED REAL ESTATE

In a sense the holdings of foreclosed real estate symbolize the course of the great depression and its effect on our banking system. Although the co-operative banks had encountered trouble in this direction in the period culminating in 1901, when they had some 3.6 per cent of their assets in foreclosed property and a third as much more in common form mortgages resulting from previous foreclosures, the savings banks kept well under 1 per cent and it might be said that, until the depression, the volume of foreclosed real estate was never more than a comparatively negligible factor in the condition of any of our banks. It was not until the end of 1929 that this item again amounted to as much as 1 per cent of total assets for the co-operative banks, and not until the end of 1931 that the savings banks reached that figure. In both kinds of banks the totals increased steadily until, at the end of 1936, both reached their peak—the co-operative banks with \$54,094,925, constituting 11.86 per cent of their total assets, and the savings banks with \$158,382,256 or 6.73 per cent of their assets. In each case the curve dropped slightly in 1937 and 1938, more in 1939, and with increasing rapidity in 1940 and 1941.

During the year ending October 31, 1941, in spite of all new foreclosures, the co-operative banks reduced their holdings by more than 36 per cent, to \$23,291,666 or 5.84 per cent of their assets, and the savings banks by more than 25 per cent, to \$97,914,656 or 4.08 per cent of their assets. This, for the co-operative banks, represents a drop of \$30,803,259, or nearly 57 per cent,

from the 1936 peak, and \$60,467,600, or nearly 40 per cent for the savings banks. Both the co-operative banks and the savings banks have regained so much ground that they are back below the levels prevailing eight and seven years ago, respectively. Eighteen co-operative banks and five savings banks had no foreclosed real estate whatever as of the close of October, 1941, and forty-six co-operative banks and thirty-two savings banks had less than 1 per cent of their assets in such property. In the trust companies, foreclosed real estate represents only 3/10 of 1 per cent of total assets in the commercial departments, and 1.89 per cent in the savings departments.

These excellent results have been made possible in large measure by changed economic conditions, but they also represent constant effort on the part of the executives of the banks. If this vigilance and effort are maintained, the losses to be expected from the liquidation of the remaining properties should be absorbed without undue difficulty, especially since they will be spread over some interval of time.

Certain generalizations are possible for future guidance. Thus, almost without exception, the heavier losses were sustained on the properties longest held. The experience of one bank in selling its foreclosed residential properties is perhaps typical of the experiences of other banks. If properties were sold within a year after they were acquired, they sustained a certain average loss, but that loss was increased by 50 per cent in the case of properties sold during the second year after acquisition, and by 120 per cent as to properties sold more than five years after acquisition. Included in these averages were a few individual properties that were sold within a year at some advance above acquisition cost, but among those held five or more years only one ninth as many showed any such advance. These loss figures related only to selling prices and did not include overhead expense for handling the foreclosed real estate, or loss of income on the money tied up in such ownership, or loss of liquidity which had to be maintained in some other way.

Another generalization which follows as a corollary is that, virtually without exception, those banks which promptly and resolutely faced and took their losses recovered more quickly and are now in a better position than those which failed to do so. In so far as the ability to face and absorb losses depended on the existence of ample reserves, that was an added benefit derived from the existence of those reserves.

The department has continuously urged the banks to recognize potential losses by adequate charge-offs on properties already held in foreclosure, and to take into foreclosure properties held in mortgages on which eventual losses were clearly inevitable. As a result of such action the properties still held in foreclosure are carried at far sounder values, and the outstanding mortgages have far less potential loss, than was formerly the case.

#### FORECLOSURE PLANS AND PROSPECTS

The uncertainties of a war economy require that all plans be formulated on a tentative basis and each bank's problems be given individual consideration, but, with that understanding, the attitude of the department toward the foreclosed real estate problem remains essentially unchanged.

The imposition of war time priorities which divert building materials to war uses with corresponding restriction of residential construction and the rise in all costs and prices may be expected to increase the value of foreclosed properties and consequently to facilitate their sale. So, likewise, reduced yields in other forms of investment should make sales of real estate on an income basis more attractive, and it should be salable also as a hedge against inflation. As against these factors, however, are increasing business dislocations which tend to strangle entire localities, increasing government competition in the housing business, unprecedented changes in public demand as to size and styles and construction materials in housing, and the likelihood that rents will not rise in proportion to the costs of ownership.

Decentralization in the larger municipalities threatens to seal a permanent doom on the values of certain types of city properties and, in general, the property now left in foreclosure is of the type that is likely to benefit least and suffer most from impending conditions. It is claimed that the automobile alone has increased by ninefold the usable area in every city. It is not surprising that few tall buildings today pay their way when people and business can, with equal facility, spread over nine times as much area as was convenient when they were built. While war conditions, and especially the changes in transportation, may somewhat reverse this trend toward decentralization, nevertheless, drastic charge-offs must be contemplated.

Under such circumstances, informed opinion throughout the state and the nation seems virtually unanimous that, in spite of expected inflation, the banks should continue the orderly liquidation of their real estate holdings as rapidly as possible. For most of our banks it should be a reasonable objective that before the close of another year all such property should be either actually disposed of in the form of sound sales to strong owners or marked down to a point where all potential loss will have been recognized and absorbed. All banks must be prepared to face the close of the present cycle freed from the debris of the last depression and, in reserves, liquidity, and soundness of investments, ready for any eventuality.

### INVESTMENTS

Now that foreclosed real estate is ceasing to be such an urgent problem, attention must increasingly be directed toward the charging off and the orderly disposal of substandard bonds and other securities. The department expects to become more and more insistent as to this and as to the reduction of, or creation of reserves against, all excessive and dubious mortgages. Not only is this a good time to get the house in order but it is also a very dangerous time to neglect to do so.

It will, no doubt, be the part of patriotism to continue to have large holdings of government obligations but that merely increases the need for continuous study and skilful selection of maturities and types of obligations. Such care will in no sense be at the expense of full support of the government, but its absence may be at the serious expense of the bank.

### MAINTENANCE OF RESERVES AND CAPITAL RATIOS

Until 1932, co-operative banks were not allowed to maintain reserves above  $5\frac{1}{4}$  per cent of total liabilities and, when that limit was reached, the shareholders were entitled to all current earnings. In that year the limit was raised to  $10\frac{1}{4}$  per cent. In the next year the corresponding limit for savings banks was raised from  $10\frac{1}{4}$  per cent to, and now remains at,  $15\frac{1}{4}$  per cent of deposits.

It might well have been expected that the absorption of losses resulting from the rapid sale or charging down of foreclosed real estate in recent years would have made heavy inroads upon the reserves of the savings banks and co-operative banks but, in spite of all such losses, the reserves in both kinds of banks have risen continuously throughout the entire foreclosed property era. Thus, without a single recession, the reserves in both cases rose in an approximately straight line from 1931 to 1941 when they reached an all time high. Thus the savings bank reserves rose from 8.60 per cent of deposits in 1931 to 10.46 per cent in 1941 (or 12.72 per cent if securities be taken at market instead of book values), while, for the corresponding period, the reserves in the co-operative banks rose from 3.55 per cent of total liabilities in 1931 to 6.19 per cent in 1940 and 1941. The savings banks are here given as a ratio to deposits and the co-operative banks to total liabilities because that is the statutory basis prescribed for computation of their reserves.

For some considerable time the Federal Deposit Insurance Corporation has urged that every bank covered by its insurance ought to try to maintain, as

a minimum, a net sound capital equal to at least 10 per cent of its average total resources and that not more than half of this capital should be in some form of surplus, the other half being in capital stock held by financially responsible owners. Originally their formula was based on 10 per cent of the average outstanding deposits, rather than resources as at present. The change in base, which in its net result amounts to about an additional 1 per cent, came about primarily from a realization that the potential shrinkage which the capital could be called upon to cushion or absorb would be a shrinkage of all the assets rather than a scaling down of deposits. To the argument that cash and government bonds are supposedly immune to shrinkage they reply that the structure of a bank's assets is continually changing whereas the capital structure is of a relatively permanent nature and, even if the assets did not materially change, the enlarged figure is still a minimum of the assurance that depositors are entitled to have, and is not more than the bankers ought to be willing to maintain in return for their chartered privilege of inviting public deposits. The experience of the last depression amply justifies this position and the rapid increase in deposits and assets in recent years, with corresponding decrease in capital ratios, gives added emphasis to the suggestion.

The objective of at least half the capital being in the form of strongly held capital stock is grounded in experience, for in the event of heavy losses there is more likelihood that the stockholders can and will come forward with additional capital than would be the case if there were relatively little stock, and that in weak hands, for there would then be neither inclination nor ability to aid a bank which had already lost its large surplus. Admittedly these are but general goals and objectives toward which to work and which in some cases can be controlled only in negative fashion by refusal of permission to retire stock which, a few years hence, a bank might desperately but vainly wish it were able to get back into its capital structure.

It is encouraging that in the aggregate all of our commercial banks, both insured and uninsured, already substantially exceed the capital ratio just described and that our non-commercial mutual savings banks exceed the original suggestion of 10 per cent of deposits and have virtually reached the revised suggestion of 10 per cent of resources.

### LIQUIDITY

Although the maintenance of liquidity ordinarily involves some loss of income, the lack of liquidity may lead to far greater losses. A sound balance should be sought between current income and ample liquidity but with emphasis on liquidity sufficient to meet the needs of an uncertain future. Bankers, who, during the last depression, sold their good bonds at drastic sacrifices rather than to call their loans from borrowers who could not readily pay are wisely resolving to keep sufficiently liquid so they will never hereafter have to sacrifice securities or unduly embarrass their customers.

### MANAGEMENT

Management still constitutes the crucial test of a bank. In the commercial banks, the self-interest of the stockholders more or less automatically insures constant attention to the quality of management, but in the mutual thrift banks the ownership interests are so dispersed and minutely subdivided that it is much more difficult to accomplish this result.

One disturbing tendency is for a few boards of directors or trustees to go on and on without change of personnel, gradually wearing deeper into the runs of custom, insulated against the influx of newer points of view, growing collectively older but with no younger men in training to assume the responsibilities which eventually must be shifted to others. Of the same nature, but even more dangerous, is the wide gap that often exists between the top executive of a bank and the juniors next in line. It should be a primary imperative that every bank should have competent juniors in line and should

entrust them with sufficient responsibility to give them real experience. Our banking systems are particularly fortunate in that there is an encouraging group of exceptionally fine younger executives in both the savings bank and co-operative bank fields but there are many others who would develop if given a chance.

To hold and develop these groups of men is of vital importance, for the thrift banks have to compete for executive talent with every other financial, commercial and industrial enterprise. To buy modern equipment costs money, but in the end it more than pays to do so. In much the same way I believe the payment of more adequate salaries, if and wherever necessary to obtain stronger management, and the enactment of legislation to permit the establishment of a contributory old age retirement system to supplant the more costly pensions involved in retaining executives and employees beyond their period of useful value, would, in the end, effect very great savings for the depositors.

### RESEARCH

A recent survey by the National Association of Manufacturers is reported to have indicated that the industries of the nation are spending three hundred million dollars a year for research by seventy thousand research workers in some twenty-five hundred laboratories. The need for research, today, is as great among the banks as among the industries. I believe that the banks should create and properly support a full time bank research bureau. To neglect the possible benefits of research under the present changing conditions would seem to be little short of a breach of trust.

### CENTRAL CREDIT AND STATISTICAL SERVICES

Some losses occur because banks are not sufficiently pooling their information about credit risks, rental and sales experiences, and similar items of mutual interest and value. There is, too, considerable duplication of effort and mediocre performance in the field of investment analysis. Experiences in nearby states point the way to co-operative effort along these lines. At least, in the face of today's problems, it is worthwhile exploring the possibilities of benefit to be derived from such mutual efforts.

### BLIGHTED AREAS

Perhaps a bit further afield, but certainly still within the realm of reason, is the desirability of some collective study of the cause, prevention, and rehabilitation of what have come to be known as blighted areas. Already it has been demonstrated that intelligent, concerted action may often stem, or even reverse, the trend of certain areas to decline in value. While the property owners are the primary losers in blighted areas, the lending institutions and the taxing authorities are inevitably heavy losers as well. Some area blight is inevitable but that is no justification for supine acceptance of avoidable blight loss. At least three states, New York, Michigan, and Illinois, are said to have enacted state laws to aid in urban rehabilitation. Perhaps similar legislation might be desirable here, but much can be done without any new laws.

### TAX SAVINGS CLUBS

A great deal of the banks' losses through foreclosures during the depression arose through tax delinquency on the part of the mortgagors. Some of this was unavoidable, but much was due to an avoidable lack of foresightedness on the part of the property owner. In considerable measure this is being forestalled now by requiring the borrower to prepay his taxes by monthly instalments. In cases where that plan is not in operation or is unacceptable to the borrower, a distinct service to him and to the bank may result if he can be induced to join a tax savings club. Such service need not be restricted to real estate taxes.

## SERVICE CHARGES AND DIVIDEND RATES

One of the things that would speed the return to higher earnings would be the elimination of part of the cost of carrying certain accounts which do not pay the bank to handle and which, therefore, in the case of the mutual banks, are handled at the expense of the other depositors. It has been the function of the thrift banks to aid the small saver, but it may be that, in justice to the other thrift savers, the savings banks ought to be excused from paying interest on accounts which can be handled only at the expense of the other savers. That would still afford even the smallest saver the free use of the safety and convenience of the thrift bank.

In general, two factors make an account costly to handle, namely, its smallness or its activity, or both. It may well be that the law should be changed to permit a bank to classify its accounts and pay no interest on the very small ones, and perhaps two or more different rates on those of larger size or less activity, or even to make a small service charge for excessive activity. The decisive factors would seem to be to balance thrift help and encouragement to even the smallest depositors against the right of the other depositors to the fair earnings on their savings without undue reduction because of the cost of carrying the accounts which are too small or too active. The carrying costs are susceptible of rather accurate analysis and the approach should be to achieve the largest good to the largest number.

## AMORTIZATION OF BOND PREMIUMS

When a bond is purchased at a premium, it is known that only the par value will be paid at maturity. Various methods have been adopted for charging off that part of the purchase price which is in excess of the final maturity value. The prevailing practice, at least in savings banks, has been to charge off the excess at once, taking it out of surplus, and carrying the bond thereafter at its par or maturity value. This has frequently been regarded as the most conservative method and has resulted in a concealed, but gradually diminishing, surplus which does not appear on the books. This has been one of the chief reasons why the aggregate surplus of the savings banks, taking the securities at market values, has always been substantially higher than the published book values. Thus the published book value surplus of these banks as of October 31, 1941, was 10.46 per cent of the total deposits, whereas, taking the securities at current market values, the actual surplus was 12.72 per cent.

In spite of the substantial opinion to the contrary I believe that instead of being more conservative, this method has often worked out in exactly the opposite direction. Because of this incorrect, because too small, measure of the true surplus, some banks have hesitated to dispose of substandard securities or foreclosed real estate, or to make desirable charge-offs, lest they too greatly deplete their published surplus. In other words, the surplus is too severely depleted when the bond is bought with the result that at some later time it is impossible to make charge-offs which are much more needed. However, the greater danger arises from the fact that once the initial charge-off is made, the bank thereafter regards as true income the entire coupon income when and as received, thus leading itself to believe that its current income is larger than it actually is. Current expenses, dividend payments, and investment policies are thus based on an incorrect estimate of the actual current income. At maturity, in order to replace the fictitiously high income, there is a strong temptation, if not an actual necessity, to reinvest the proceeds in some high yielding, but less safe, investment. In times of low income, there is always a tendency to reach for greater profits at greater risk, so it is particularly desirable not to get in a position where there is no escape from so doing. Thus in three directions the supposedly conservative practice leads to undesirable and, at times, dangerous results.

It is recommended that as to purchases hereafter made above par, the excess, or premium, be currently deducted from each coupon or interest receipt, the

deduction being made in instalments based on the number of years the bond has left to run to maturity or to an earlier call date if there be one. This need not be a complicated process, for the size of each semi-annual deduction can be figured once for all when the bond is purchased and the deduction can be made by a single entry combining all such deductions whenever the current income is computed. While there are more technically scientific methods, the so-called straight line method above described is sufficiently accurate for all practical purposes. The ultimate effect of this will be to show a higher surplus but lower current income and should generally be the sounder procedure.

### PROGRAMMING THE FUTURE

Notwithstanding the uncertainties of the times, perhaps, indeed, because of them, it is urged that each bank try to establish for itself specific objectives to be attained one year, two years, five years, hence. This is not in the spirit of New Year's resolutions but rather as attempts to envision a destination and chart a course. Among the early objectives should be the orderly disposal of all foreclosed real estate, substandard securities, or other less-than-prime investments; the rearrangement, if necessary, of the security portfolio including proper spacing of maturities; the elimination of mortgages or other loans that are above the legal limit; the elimination of all overdue interest and tax accounts; foreclosure or other adjustment of mortgages which contain ultimate losses; proper depreciation of bank building and other depreciable property; correction of any maladjustments in salaries or expenses; building of reserves of some specified size; increase, or decrease, of deposits or current, paid-up or matured shares; training of employees and junior executives; and other objectives fitted to the needs of the specific bank. The objectives and the program may need constant revision but even therein will be part of their value. Right now is the time to collect bad paper, strengthen weak loans, get rid of undesirable investments.

### LICENSED LOAN AGENCIES

This year marks the close of three decades of experience in licensing loan agencies for, in 1911, Massachusetts enacted the first small loan law in the United States. This department, through its division of banks and loan agencies, is charged with the administration of that law and the supervision of the business of making small loans. By statutory definition the small loans within the supervision of this department are only those which do not exceed three hundred dollars in amount and on which the interest and other charges are at a rate in excess of 12 per cent a year computed on unpaid balances. In times past there have been differences of opinion as to whether or not transactions involving a note or other instrument evidencing the indebtedness of a buyer to the seller of goods, services or insurance for a part or all of the purchase price were included within the existing statutory definition of small loans but, by Chapter 158 of the Acts of 1941, they were expressly excluded from such supervision and were referred to a special commission for intensive study to determine whether, and to what extent, the commonwealth should exercise jurisdiction over transactions of that type.

During the license year ending September 30, 1941, there were two hundred and seven licensed agencies and two chartered companies under the supervision of the department. Of these, two hundred were actively engaged in the business throughout the entire year and they made 312,442 loans amounting to \$46,892,-692.88 on which their gross earnings were \$7,461,058.98, and their expenses and losses were \$5,374,477.90, leaving net earnings of \$2,086,581.08. As of September 30, 1941, their loans outstanding amounted to \$25,699,452.06 which is an increase of \$3,286,336.71 over the previous corresponding period for 1940. As compared with the license year 1940 the number of loans increased by 29,719, the amount of loans by \$6,142,405.91, the gross income by \$711,809.12,

and the expenses and losses by \$753,304.36, thus showing a shrinkage of \$41,-495.24 in net income. A more complete report on the activities of this division is filed annually by the supervisor of loan agencies.

Licensed loan agencies are affected by two Acts of the 1941 session of the General Court:

CHAPTER 82. A resolve providing for a study of the general problems of consumer credit by a recess commission, and

CHAPTER 158, which exempts from the operation of the Small Loans Act certain instalment contracts for goods, services and insurance.

### LIQUIDATIONS AND SAFETY RECORD

In 1933 the deposits in the Somerville Institution for Savings and in the Millbury Savings Bank were reduced by order of the Supreme Judicial Court and certain of the assets were directed to be set aside and liquidated, the proceeds of such liquidation to be distributed proportionately to reimburse the depositors whose accounts were thus reduced. The liquidation of those assets was completed during the past year, and the depositors in the Somerville Institution for Savings received in all a total of 67 per cent of their original deposits, while the depositors in the Millbury Savings Bank received 95 per cent.

Since these closings occurred before the inauguration of the state-wide insurance fund which now gives statutory insurance coverage up to the full amount of every deposit in all of our mutual savings banks, and since no depositor losses have occurred subsequent to the establishment of that fund, it is appropriate to summarize the results of the first century and a quarter in the history of our mutual savings banks.

A careful examination of all available records indicates that the aggregate of all depositor losses during the past century and a quarter amounted to approximately 1/40 of 1 per cent of the total deposits during that period. That record of safety has probably never been equalled by any system of financial institutions in history. This record becomes even more impressive when it is realized that the depositors received last year in interest or dividends on their accounts more than nine times as much as the aggregate of all losses sustained during the past one hundred and twenty-five years. Again, it is reassuring to realize that the sum total of all the losses sustained by the depositors during all the vicissitudes of the last century and a quarter are less than three quarters of the amount of the net sound assets of the current insurance fund.

Some of the factors which have contributed toward this extraordinary record of safety have been the general economic background of this region; the self-restraint of the savings banks which has tended to make service of their particular community their objective rather than mere size; the care which has been exercised in the issuance of charters; the number of separate units into which the system has been divided; the thrift and integrity of both borrowers and bankers; the administrative structure of the system itself; the limitations on the size of deposits; the maintenance of ample reserves as a prerequisite to the payment of dividends; careful restriction on the type of investments; ample liquidity; and, in general, the public spirited attitude of the bankers themselves.

### THE WAR

It is too early to appraise the effects of our entry into the war in the second week in December. While there was some uneasiness there was remarkably little disturbance and no panic even on December ninth when it was officially announced that a hostile bombing fleet in heavy force was approaching Boston and was but two hours distant. Fortunately that proved to be a false alarm but it none the less demonstrated the steadiness of our people.

In a few banks, chiefly in Boston, the first weeks saw heavy withdrawals. Although these still continue the rate has somewhat diminished. At the outset these were believed to have started from rumors that the government planned to confiscate savings but such intentions were promptly and vigorously denied from Washington. Some indications point to considerable hoarding, much of it doubtless by foreign nationals or others of foreign descent who fear drastic governmental freezing of their accounts.

Heavy withdrawals have also been made for the purpose of purchasing defense bonds. Every one of our commercial banks, every one of our mutual savings banks, and most of our co-operative banks have responded to the call of the government that they qualify as issuing agents for the sale of defense bonds.

The banks are working out the best procedure for keeping duplicate records as a safeguard against enemy destruction of the originals. It is important that such duplicates be so distinguishable—by size, color, or otherwise—that they could not be substituted for the originals, for the existence of records which could be so substituted would be an open invitation to any employee who might desire to falsify his records. Some form of microphotography is generally regarded as the most satisfactory method of duplication, the negatives to be stored at some place remote from the bank. One of our largest savings banks was generously given the use of the Recordak facilities of a neighboring commercial bank and, at an expense of only one hundred twenty-five dollars, between the closing on Saturday noon and reopening the following Monday morning, it microphotographed all of its financial records, notes and other valuable papers. Some seventy thousand pictures were taken on eighteen films which were put into a sealed package about six by eighteen by twenty-four inches in size, and they are now stored in a safe deposit box a long way distant from the bank. Current transactions will be similarly handled at reasonable intervals. Thus far, the department has left to the sound discretion of each bank the decision as to what records shall be duplicated, how they shall be safeguarded and kept confidential during the process, and how much expense is justifiable for that purpose.

Any future historian who may wish to reconstruct the scene of these days will want to picture our bankers selling war savings stamps and defense bonds; hanging opaque window curtains in preparation for blackouts; rearranging files and records for better fire protection and for instant removal to basements; drilling employees to meet air raid or other emergencies; puzzling over the deluge of interpretations of federal Regulation W intended to restrict installment selling and financing; struggling with blocked and frozen accounts of foreign nationals; facing heavy taxes, rising costs and shrinking investment returns; seeking to meet the uncertainties of present and impending business dislocations of unprecedented magnitude; perplexed by a confused investment outlook; recasting their personnel to meet the diversion of their employees into the armed forces and war industries; and, withal, going about their daily tasks with little external evidence of perturbation. We read about but can scarcely visualize the government's wise and unavoidable scorched earth policy which compelled Honorable Francis B. Sayre, one of our former prominent citizens and now High Commissioner of the Philippines, to destroy securities, currency, bullion and other valuables whenever necessary to prevent them from falling into enemy possession in Manila.

The financial dislocations resulting from the war are bound to be far reaching. Each bank and each person connected with a bank can be a veritable tower of strength in the maintenance of national morale. Their patriotism and poise have been magnificent. In them, and in the stability and public spirit of the banks will be found a sturdy bulwark for the nation in this time of supreme testing.

## GENERAL LEGISLATION ENACTED

CHAPTER 25. Judicial foreclosure of mortgages upon real estate in which soldiers or sailors may be interested.

CHAPTER 40. Extending to December 31, 1945, the Act authorizing modifications of mortgage loans.

CHAPTER 215. Negotiable instruments payable to fictitious payees made bearer paper.

CHAPTER 221. Distribution and sale by certain state chartered banking institutions of United States Defense Savings Bonds and Stamps. (See also Chapter 575, Credit Unions.)

CHAPTER 260. Extension of the period in which certain F.H.A. insured loans on real estate may be made.

CHAPTER 444. Safeguards for banks receiving adverse claims to deposits or securities held in the names of others.

CHAPTER 573. Separate tax bills (and payments) on separate parcels of real estate.

Paid-up Share Certificates . . . . .	3.14	3.25
Dividend Savings Account . . . . .	3.05	3.16

## TRUST COMPANIES

## COMMERCIAL DEPARTMENTS

The total resources of the commercial departments of all trust companies, now numbering seventy, as of October 31, 1941, amount to \$590,229,000 which again represents a substantial increase. The amount of the increase since October 31, 1940 is \$31,976,000 or 5.72 per cent which is somewhat lower than has been the case in the last two years, but the present total resources are at the highest point in more than a decade.

The number of trust companies decreased by one since October 31, 1940, caused by the Weymouth Trust Company entering into voluntary liquidation as of May 7, 1941, after its merger into the Granite Trust Company.

The net increase in total assets is for the most part accounted for by an increase of over \$41,762,000 in securities owned and \$13,736,000 in loans, less the decrease of cash on hand and in banks of \$25,581,000.

The total amount of cash on hand and in banks now amounts to \$184,746,000 and represents over 31 per cent of the total assets and nearly 37 per cent of the aggregate deposits in this department. This is a somewhat lower ratio than was shown on October 31, 1940. The reduction in cash holdings is very nearly offset by the increase in holdings of United States Government obligations of \$24,068,000.

Secured loans, excluding loans on real estate, and unsecured loans, including those made on a weekly or monthly instalment basis, account for the increase in total loans. The amount of real estate loans has decreased \$1,558,000. The aggregate amount of all loans equals 30 per cent of the total assets in contrast to the ratio of securities owned of close to 36 per cent. Little change is noted in this ratio of loans to total resources but the proportional amount invested in public funds and corporate securities has sharply increased from 30 per cent to the present 36 per cent. United States Government obligations alone comprise over 25 per cent of total resources.

It is interesting to note, however, that following the steady decline noted in unsecured loans, which is the most usual form of credit extension to business by commercial banks, for some years prior to the bank holiday in 1933 and greatly accentuated of course at that time, there has been a consistent upward trend in the volume of such loans with one brief interruption in 1937 and thereabouts. Since 1933 the total amount of unsecured loans has increased approximately \$20,000,000 or very nearly double the amount in that year. While this volume has been greatly accelerated of late, to a large extent undoubtedly due to the expanded production for defense purposes, nevertheless, reference to the record indicates that a substantial and consistent growth took place previous to the war years. The significance of this little recognized fact should be emphasized as an indication that Massachusetts industry, as a whole, is prospering and that our banks are sharing in and contributing to this condition by

exercising their normal functions as loaning institutions while at the same time substantially increasing a sound earning asset.

Real estate acquired by foreclosure has again been substantially reduced, by \$493,000. The present book value of \$1,795,000 is but 3/10 of 1 per cent of the total assets.

Deposits increased \$30,939,000 to \$501,324,000, a gain of 6½ per cent. This is consistent with the trend of the past few years. Since October 31, 1938 deposits in commercial departments have increased \$126,000,000 or 33.6 per cent, a quite remarkable growth. The number of depositors has grown to 194,536, an increase of 2,454 in twelve months.

Reductions of preferred stock amounting to \$1,102,900 have been made. Common stock shows a net increase of \$50,000.

Surplus, undivided profits and reserve accounts have been further strengthened by an addition from the net profits of \$1,752,000 and now total \$49,883,000, or about 10 per cent of all deposit liabilities in the commercial department.

The aggregate of capital stock, surplus and all other profit and reserve accounts, of all departments of trust companies, despite the retirement of \$1,102,900 of preferred stock for the past year and about \$4,000,000 in the last six years, as well as the tremendous influx of deposits for the past few years, still bears a ratio to the combined deposits of the commercial and savings departments of nearly 15 per cent, and to the total assets of both departments of approximately 13 per cent. This is considerably above what is generally considered to be the minimum proportion that capital funds should bear to deposits and total assets, and is well above the national average for commercial banks.

#### SAVINGS DEPARTMENTS

As of October 31, 1941 the aggregate resources of savings departments of trust companies amounted to \$166,575,000, an increase of \$1,030,000 since October 31, 1940.

Deposits continue to increase but the tempo is much slower. The net increase for the past year amounted to \$813,000 or about ½ of 1 per cent. The growth of deposits in this department has been steady since 1933, showing increases each year with one exception. Deposits since that year have increased by about \$38,000,000 or approximately 32 per cent. The number of depositors has grown from 347,840 to 354,702, an increase of 6,862, in the past year.

Public funds, consisting principally of United States Government obligations, again show a substantial increase amounting to \$5,409,000 or nearly 8 per cent and now total \$73,484,000, or more than 44 per cent of the aggregate assets of this department. Holdings of all other types of securities have been reduced by \$1,378,000 thus resulting in a net increase in investments of \$4,031,000 or more than 5 per cent, and continuing a trend that has met but little interruption for a number of years.

Real estate loans in this department are larger by \$888,000 and now total \$66,439,000 or about 40 per cent of all assets. With the exception of public funds this is the largest single asset now held by savings departments.

Liquidation of real estate held by foreclosure proceeds at a rapid pace. The reduction accomplished in the past year amounts to \$1,389,000 or 30 per cent. Present holdings total \$3,150,000 or 1.89 per cent of total assets. It is evident that the great majority of our trust companies are alert to the possibilities of the steadily improving market for real estate and have accelerated their efforts to convert the foreclosure account to a sound earning asset, or have by realistic appraisals been enabled to reduce the book values of these properties to a figure that is more in conformity with present day values and thus more attractive to prospective purchasers. It is pertinent to observe that the foreclosure account has been steadily reduced from its high point in 1936, so that it now shows a shrinkage of more than \$4,500,000. There is some measure for hope here that further aggressive efforts will result in the complete elimination of this non-banking asset in the not too distant future.

Personal security loans have again diminished, by \$1,705,000, and thus there continues what appears to be a well developed downward trend.

The undivided profits, reserve accounts, and the guaranty fund in this department showed a relatively small increase as compared with recent years, but they nevertheless aggregate \$10,032,000, or 6.03 per cent of deposit liabilities in this department. Over 57 per cent of this amount is composed of the guaranty fund which is applicable solely to losses in this department.

As further protection, depositors in the commercial departments and savings departments in sixty-five of our trust companies are protected through insurance in the Federal Deposit Insurance Corporation whereby the accounts of each depositor are insured to an amount not in excess of \$5,000.

### TRUST DEPARTMENTS

For the eighth consecutive year the total resources of these departments have increased, and now amount to \$1,187,238,000, an increase of \$10,536,000 during the year. The increasing extent to which the public is using the facilities afforded by our trust companies in their various fiduciary capacities is graphically illustrated by a brief glance at their record of growth.

In 1900 the total assets of all trust departments amounted to only \$13,875,705. The present resources of trust departments are nearly five times as great as they were in 1920, have just about doubled since 1928, and are larger by nearly one-half than they were in 1930.

## LEGISLATION ENACTED

CHAPTER 104. A new restriction upon savings department deposits in commercial departments.

CHAPTER 115. Making certain railroad securities legal investments for savings departments.

CHAPTER 391. Regulations upon authority to do the business of a banking company.

CHAPTER 438. Sale of negotiable checks by banking companies.

CHAPTER 474. Collective investment of small trust funds.

CHAPTER 484. Certain new restrictions upon the investment of commercial department funds.

## CORPORATIONS SUBJECT TO CHAPTER 172A OF THE GENERAL LAWS

There has been no change in the number of corporations subject to this act during the past year. An amendment to this Chapter was made, however, by the enactment of Chapter 391 of the Acts of 1941, effective January 1, 1942, which removed the words "similar plan" and other descriptive language, and which may result in some reduction of the companies now subject to the provisions of Chapter 172A.

On October 31, 1941 the total assets of the seventeen companies now operating under this statute amounted to \$13,367,158, which represents an increase of \$968,900, or nearly 8 per cent. Their liability to holders of unpledged investment certificates was \$5,211,997, an increase of \$579,866.

Five companies of this group have qualified as "Banking Companies" in accordance with the optional provision specified in the law.

## DEPOSITS WITH OTHERS THAN BANKS

(Private Bankers, so-called)

During the year ending October 31, 1941, the total transmissions to foreign countries by the two corporations and one individual authorized to engage in that business under the provisions of Chapter 169 of the General Laws, amounted to \$325,558, an increase of \$74,745 from the preceding year. The customers of these bankers are protected by surety or collateral bonds in the custody of the State Treasurer. Their other assets, not being under the supervision of this department, are omitted from the consolidated statement appearing in this report.

Respectfully submitted,

JOSEPH EARL PERRY

Commissioner of Banks
